

RackGuard Guardrail

Made from an exclusive impact-absorbent polymer, **A-SAFE's RackGuard** is able to withstand multiple impacts without deforming or dislodging.

IMPACTS DISSIPATED

Designed to withstand side and front impacts. Unique absorption properties transfer impact energy around the rack leg, rather than into it.

SECURELY GRIPPED

Compression hinges and rubber grip points ensure RackGuard stays firmly on the leg.

QUALITY & CONFIDENCE

Tested and independently verified by TUV and certified to meet standards EN 15 512 and FEM 10.2.02.

SMALL FOOTPRINT

Ergonomically designed to protect rack legging without taking up space when in use or in storage.

“ Busy warehouse operations like ASDA have a high volume of traffic, therefore sub-standard safety systems are not acceptable. The products are not only easy to install and adaptable to our ever-changing needs, but require little upkeep or repair and therefore we are finding that **A-SAFE** products are saving us thousands of pounds a year.
